

FACT SHEET

According to the FDA, "Scientific evidence suggests but does not prove that eating 1.5 ounces per day of most nuts, such as pistachios, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease."

One serving of pistachios has as much potassium (300mg, 8%) as an orange (250mg, 7%).

Pistachios contain more than 10% of the Daily Value of dietary fiber and essential vitamins and minerals like B₆, thiamin, copper and phosphorus.

A one-ounce serving of pistachios equals 49 nuts — more per serving than any other snack nut.

You can obtain about as much dietary fiber from a serving of pistachios (2.9g, 12%) as from a 1/2 cup cooked broccoli (2.5g, 10%).

Pistachios are a naturally cholesterol-free snack that contain 1.5g of saturated fat.

Pistachios, with 6g of protein, are considered part of the protein group according to the USDA MyPlate.

Pistachios, like olive oil, primarily contain monounsaturated fat. The *Dietary Guidelines for Americans* recommend you get most of your fats from sources of polyunsaturated and monounsaturated fatty acids.

NUTRITION FACTS

SERVING SIZE 1 OZ. (28.35 G) OR 49 ROASTED/SALTED PISTACHIO KERNELS
